

INDIGO LT: THE UNIVERSAL-PURPOSE AND TILTABLE TRANSPORTER

Thanks to its double-acting hydraulic system, the tiltable Indigo LT makes very small approach angles possible. As a result, this strong trailer is more than capable of transporting cherry pickers, excavators and other heavy machinery with limited ground clearance. This model is built as standard with a 3,500-kg gross loading capacity; its dimensions are a handy 410 x 184 cm. With a strong chassis and solid steel walls, this model can definitely take a knock or two!

The parabolic suspension system, which includes shock absorbers, a 120-cm high continuous tailgate, an extra strong jockey wheel, multiplex floor and 195/50 R13 C tyres are all provided as standard too.

Various options are available, including an aluminium profile floor, a wire-mesh rack, or dropsides, and transform your Indigo LT into a well-equipped and functional transporter!
